CAREER SUMMARY

Full-stack Developer
1337 | February 2021
- A platform that helps 1337's school restaurant gather feedback on their daily menus and gives students the ability to vote for the meal. This platform was made for both campuses in Benguerir and Khouribga

DevOps Developer
Freelance | November 2020
- Making a bash script that automates the installation of an application in a server using docker which installs the services needed for the app to work.

Frontend Developer
UM6P | Mar-Sep 2020
- a platform (Math on demand) with React.js where students can ask questions about complex math and get help from professors from numerous universities in morocco

Full-stack Developer
Freelance | Mar 2019 - Jan 2020
- MailSender: A web application that is capable of sending emails up to 500.000 emails in an hour with a real-time analytics dashboard and friendly UI.
- MailTracker: Providing the client with a platform to track emails for his marketing campaigns. The platform gives analytics about opened and clicked emails for over 5 million users.
